RE: Suncor's Proposed Forty Mile Wind Power Project

Dear community member:

Suncor believes that our stakeholders have a right to be informed about our activities, participate in a transparent engagement process, and have their views included in our project planning.

In May 2017, we shared the initial turbine layout for the proposed Forty Mile Wind Power Project ("Project") with landowners, occupants and residents within 2000 metres of the project area, and with the general public at an open house on May 17th at the MultiPlex in Bow Island.

In this package, we're sharing updated information about the proposed Project through the enclosed newsletter and maps. This new information includes changes to turbine locations from the initial turbine layout that was shared in May 2017. Turbine location changes are a result of additional information we've gathered over the last couple of months, including engineering studies, environmental considerations, sound and shadow flicker studies, as well as feedback from community members. As we learn something new about potential impacts of our planned Project, we adjust the Project layout to minimize the impacts.

The main map included in this package shows the updated layout for the Project, which includes revised turbine locations, roads and the electrical collection system. The reverse side of the main map includes four photos of landscapes in the Project area with simulated turbines to help you get an idea of how the landscape could change in the County of Forty Mile if the proposed Project is built.

In addition, we are including a map showing sound contours and shadow flicker effects for the current layout. The sound contours reflect expected daytime or nighttime sound levels in relation to the strict provincial guidelines for noise. The map also shows how many hours per year a residence may experience a shadow flicker effect without considering the reduced impact from existing trees or structures.

This package also includes responses to some of the questions we've heard from the community as well as a brochure from the Alberta Utilities Commission which describes your rights and options for participating in development Projects such as ours.

More information about the proposed Project is available on the Project website (www.suncor.com/fortymilewind).

This additional information includes the following (see over):

- additional images of landscapes from different viewpoints near the Project area showing simulated turbines;
- a summary of the environmental studies completed to date; and
- previously shared Project information.

If you are a landowner, resident or occupant within 800 metres of the Project area, a Suncor representative will contact you to describe these changes. If you are outside of our consultation radius and would like to meet with a Project representative, please contact us at fortymile@suncor.com or via phone at 1-866-344-0178 (extension 2).

Thank you for taking the time to review this information and we look forward to continuing to advance the proposed Project in your community.

Yours truly,

Christopher Scott
Project Manager and Sr. Engineer
